The 85-C was amplified from genomic DNA using the primer sequences given in AAQ27373-4. The 85-C gene was sequenced and the amino acid sequence determined. Various peptide motifs were identified and could then be in the production of vaccines for immunisation against tuberculosis. peptides may be used to raise antisera or antibodies against tuberculosis. proteins can be expressed by standard recombinant methodology. Pharmaceutical compositions comprising the proteins or nucleic acid sequences encoding the proteins can be used for the treatment, prevention, and detection of disorders including infectious diseases, immune disorders and cancer. In particular, the compounds and methods used for treatment of diseases of the respiratory system, such as mycobacterial infections, asthma, allergies, tuberculosis, leprosy, sarcoldosis and lung cancers, and disorders of the skin such as psoriasis, atopic dermatitis, eczema, allergic contact dermatitis, allopecia areata, and skin cancers such as basal carcinoma, squamous ce M. vaccae proteins. The M. vaccae proteins may be employed to activate T cells and natural killer cells, to stimulate the production of cytokines, to enhance the expression of co-stimulatory molecules on dendritic cells and monocytes, and to enhance dendritic cell maturation and function. The carcinoma and melanoma invention provides heat-killed Mycobacterium vaccae, or recombinant cell are

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sypotein - Mycobacterium leprae

C;Species: Mycobacterium leprae

C;Species: Mycobacterium leprae

C;Date: 06-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 09-Jul-2004

C;Accession: $32114

R;Rinke de Wit, T.F.; Bekelie, S.; Osland, A.; Wieles, B.; Janson, A.A.M.; Thole, J.E.

submitted to the EMBL Data Library, March 1993

A;Description: The M.leprae antigen 85 complex gene family: identification of the gene
A;Reference number: $32107

A;Accession: $32114

A;Status: preliminary
A;Rolecule type: DNA
A;Residues: 1-333 <RIN>
A;Cross-references: UNIPROT:Q05862; UNIPARC;UPI0000125061; EMBL;Z21951; NID:g287921; P
C;Superfamily: Mycobacterium avium alpha-antigen

Alpha-antigen B precursor, extracellular - Mycobacterium bovis alpha-antigen

C; Species: Mycobacterium bovis

C; Date: 21-May-1990 #sequence revision 21-May-1990 #text_chang

C; Accession: A32348; A41499; A60278

R; Mateuo, K.; Yamaguchi, R.; Yamazaki, A.; Tasaka, H.; Yamada, J. Bacteriol. 170, 3847-3854, 1988

A; Title: Cloning and expression of the Mycobacterium bovis BCG

A; Reference number: A32348; MUID:88314872; PMID:2842287

A; Accession: A32348

A; Molecule type: DNA

A; Residues: 1-323 - MA13

A; Residues: 1-323 - MA13

A; Residues: 1-323 - MA13

                                                                                                                                                                                                                                                                                                                                                            potential targets for mycobacterial drugs and vaccines.";
Nat. Struct. Biol. 7:141-146 (2000).
-I- FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure nece for maintaining cell wall integrity.
-I- SUBCELLULAR LOCATION: Secreted.
-I- SIMILARITY: Belongs to the mycobacterial A85 antigen family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN=CDC 1551 / Oshkosh;

Nature 409:1007-1011(2001).
-!- FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure necessor maintaining cell wall integrity (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-FEB-1994 (Rel. 28, Created)

Natl. Acad. Sci. U.S.A. 100:7877-7882(2003).

-I- FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure nece for maintaining cell wall integrity.

-I- SUBCELIULAR LOCATION: Secreted.
-I- PTM: Contains one disulfide bridge.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EMBL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This Swiss-Prot entry is copyright. between the Swiss Institute of Biothe European Bioinformatics Institut

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mendonca-Lima
  FUNCTION: Proteins of the antigen 85 complex are responsible for the high affinity of mycobacteria to fibromectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure necessfor maintaining cell wall integrity (By similarity). SUBCELLULAR LOCATION: Secreted.

PTM: Contains one disulfide bridge (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               297
